

## Specialist Treatment for Confidential Records

The critical documents you work with every day, including patients' medical records, need to be backed up and kept – securely – for many years. Our confidential scanning and storage service will save you space and time, and give you peace of mind in knowing there's a safe back-up system in place.

By converting your documents into electronic files we can turn the information in a four-drawer filing cabinet containing 16,000 pages into a single CD. And when you need to find a record, you'll be able to access it immediately from your desktop.

- + We've been safeguarding records for medical practitioners and NHS trusts for nearly 40 years.
- + Our scanning and storage service is cost-effective and absolutely secure.
