

# Medical Records Scanning

Flexible, efficient and cost-effective records management with the NHS in mind

- > Medical Records > A&E > GUM > Maternity > Ophthalmology > Gynaecology
- > Audiology > Finance > HR > Payroll > Occupational Health > Dental > Social Care

More and more NHS hospitals, GP surgeries, dentists, private medical trusts and consultants are having their patient's records scanned and stored electronically. In turn this can help to create a secure records management and archive system which offers easy access, secure backup and complete disaster recovery which meets compliance and saves considerably on administration, management and storage costs.

Health Minister Jeremy Hunt has planned to make GP records digital by 2015 and the NHS 'paperless' for 2018. We believe we offer an ideal solution for health organisations going digital.

## Indexing

Once scanned, we can index medical records using the following file index information, eg.

- Patient Name
- Patient ID
- NHS Reference Number

## OCR (Optical Character Recognition):

OCR is the process we use to make documents dynamic and fully text-searchable. OCR is useful if you want to search within the documents, going beyond the standard indexing parameters.

## Document Search and Retrieval Solution

We are also able to provide licence and installation free records retrieval and viewing software for clients where no corporate decision has yet been made regarding electronic document management and storage.

Our Halogen storage and retrieval software provides secure, fast and easy search of files and documents from discs, desktops, networked shared folders and servers.

Name	Date	Sales Rep	Company Name	Document Type	Pages
------	------	-----------	--------------	---------------	-------

## We scan x-rays as well as paper patient records

Some scanning companies can only offer the ability to scan paper records, but at our main facility we are able to scan x-ray images perfectly, maintaining all details of the x-ray itself, allowing them to be viewed on screen and on tablet devices such as the iPad, to go with all other records in a file.

## Benefits

- Our digital management of patient files and x-rays helps improve efficiency
- Records are searchable in seconds instead of minutes
- Considerable space-saving - records are searchable in seconds
- Low-cost solution to a much larger problem

## Are you interested in our Medical Records scanning service?

The NHS is going electronic and we believe we offer the best solution for a successful future. Contact us and allow us to show you why.
